

GUIDE TO MINERAL AND MATERIALS INFORMATION

Item 637-B

**from the U.S. Bureau of Mines--
the Minerals Source**

The Minerals Source

The U.S. Bureau of Mines is the world's premier source of minerals information. Bureau experts collect and interpret data concerning mineral production, consumption, and trade both in the United States and worldwide. Bureau economists and statisticians also perform assessments on the worldwide availability of minerals and identify potential mineral resources. Comprehensive analyses are also made on the impact of government policies, economic conditions, and political events on the mineral industry in general and on the Nation's mineral supplies.

The Bureau collects data on over 100 mineral commodities from 168 countries. Bureau mineral commodity specialists are assigned to handle specific minerals and mineral materials according to their individual areas of expertise. State activity specialists collect information about minerals from U.S. companies operating mines and mineral processing plants.

This brochure provides a list of the names, addresses and telephone numbers of principal commodity and state activity specialists at the U.S. Bureau of Mines. State activity specialists are assigned to Regional State Activity Offices in seven cities across the United States. Commodity specialists are located in the headquarters office of the Bureau of Mines. Requests for information or technical questions may be directed to the designated specialist.
